UNSTAKED

WHITEPAPER
2025

1. INTRODUCTION

Unstaked is pioneering the next, transformative evolution in blockchain ecosystems by merging the unparalleled potential of generative AI with the decentralized power of tokenomics. In a rapidly shifting digital world where attention, engagement, and trust have become the true currencies of influence and success, Unstaked empowers users to deploy intelligent AI agents capable of autonomously managing, promoting, and organically expanding communities across major global social networks such as X (formerly Twitter) and Telegram

We are not simply launching another token into the endless sea of digital assets. We are introducing a living, breathing digital economy — an economy where tokens are animated with intelligence, interaction, adaptability, and self-growth capabilities. Unstaked serves as the catalyst for a fundamental redefinition of digital ownership and influence, granting users unprecedented control over dynamic, evolving AI-powered assets that grow, learn, and act independently.

Through $UNSD, every participant transitions from being a passive holder to an active creator, stakeholder, and innovator within a thriving, self-sustaining AI ecosystem. The future of decentralized influence is here, and it is intelligent.

2. VISION

At Unstaked, we envision a decentralized future where every individual, regardless of resources or background, has the power to extend their digital presence beyond the traditional limitations of manual engagement. Using intelligent, self-operating agents, users can amplify their ambitions and establish vibrant communities around the clock, unhindered by the constraints of time zones, resources, or human limitations.

In this reimagined future, AI is not a passive background tool used merely for automation. Instead, AI becomes an active participant — an invaluable ally in shaping narratives, nurturing communities, fostering loyalty, and driving real-world impact.

Through Unstaked, users retain direct control over their AI agents, establishing a truly decentralized ecosystem where human creativity is not just supported but multiplied and elevated through autonomous, intelligent technology.

Our mission is bold yet essential: to decentralize influence and engagement, returning the power to individuals rather than corporations or centralized platforms. We are building a new kind of digital society — one where AI works for and with the people, where transparency reigns, and where collective intelligence shapes a better, freer, and more vibrant world.

3. PROBLEM & SOLUTION

Problem:

- Traditional blockchain projects and meme tokens often suffer from severely limited engagement lifecycles. They experience rapid hype-and-bust patterns, leading to short-lived interest without sustainable community value.
- The use of AI within Web3 ecosystems is frequently superficial, existing more as a marketing buzzword than a meaningful utility that offers genuine ownership, interaction, or economic contribution.
- Scaling a digital presence manually remains prohibitively time-consuming, resource-intensive, and complex, posing significant barriers for individuals, emerging communities, and small projects seeking growth.

Solution:

- **Autonomous AI Agents:** Unstaked enables users to deploy fully autonomous social AI agents that manage outreach, foster community growth, adapt organically based on social dynamics, and continuously optimize their behavior based on real-time feedback.
- **Verifiable Ownership:** Every AI agent's identity, actions, and evolution are transparently and immutably linked to its owner through blockchain technology, guaranteeing true decentralization and accountability.
- **On-Chain Proof of Activity:** Every agent's activity and engagement results are permanently recorded on-chain, forming a transparent, immutable, and publicly accessible ledger of their performance and impact.

Through these innovations, Unstaked addresses and resolves the fundamental shortcomings of both traditional Web3 projects and centralized AI systems, offering a groundbreaking paradigm where ownership, utility, and autonomy converge into a scalable, user-driven ecosystem.

4. WHAT DO OUR AGENTS DO?

Unstaked introduces a revolutionary offering to the AI agents market by democratizing access to powerful, autonomous, and fully customizable AI-driven social agents at a fraction of the traditional cost.

Unlike conventional AI chatbots or simple automation tools, Unstaked AI agents are designed as dynamic, evolving digital entities capable of managing social interactions, growing online communities, driving marketing campaigns, and providing decentralized support — all autonomously, and all transparently recorded on-chain.

What Unstaked AI Agents Offer

- **24/7 Community Engagement:** AI agents tirelessly post updates, respond to community questions, share news, and maintain audience activity across platforms like X (Twitter) and Telegram without human intervention.
- **Customizable Behavior:** Businesses and individuals can fully tailor their agents' communication style, tone, posting frequency, and even strategic priorities to align perfectly with their branding or project goals.
- **No Human Error:** Unlike human moderators or support agents, Unstaked AI agents never suffer from fatigue, bias, forgetfulness, or inconsistency. Their logic and behavior remain precise, effective, and continuously self-improving.
- **Massive Cost Efficiency:** At a projected cost of only $10–$20 per month, deploying an Unstaked AI agent is exponentially cheaper than hiring even the most affordable human support staff — offering up to 100× cost savings annually compared to human labor markets across Tier 1, 2, and 3 countries.
- **Scalability and Instant Growth:** One AI agent can manage thousands of users simultaneously, delivering consistent performance and engagement without requiring additional salaries, training, or operational management.
- **Business Flexibility:** Unstaked AI agents are suitable for countless use cases, from startup community management and NFT project marketing to SaaS customer support, e-commerce engagement, and decentralized finance community outreach.
- **Transparent Proof of Intelligence:** Every interaction is logged on-chain, providing indisputable proof of activity and agent performance, enabling trust and transparency without centralized oversight.

Why Unstaked Is Different

- **Lowest Market Price:** While competitors typically charge $15–$30 per month for basic AI engagement tools, Unstaked offers a more advanced, blockchain-integrated AI agent starting at just $10–$20 per month, making it accessible to individual users, startups, and decentralized projects alike.
- **Decentralized Ecosystem:** Unlike closed, corporate-owned systems, Unstaked operates on a fully decentralized infrastructure where all data, interactions, and upgrades are governed by token holders.
- **Evolving AI Intelligence:** Unstaked AI agents are designed to learn, adapt, and evolve over time, providing growing value the longer they operate and interact within communities.

AI Agent RIO vs. Human Labor

- **Labor Cost Savings:** Freed from a recurring ~$2k–$5k monthly salary expense, organizations can redeploy the budget elsewhere. Over a year, replacing one Tier-1 support employee ($60k/year) with a $20/mo AI agent would save on the order of **$59,700 per year** in direct wages. Even against the cheapest outsourced staff ($18k/year in Tier 3), the annual saving is around **$17,800** when using a $10/mo agent (costing only $120/year). These savings multiply for each additional human role that an AI agent can supplement or replace.
- **Scalability and Consistency:** One Unstaked agent can engage an unlimited number of community members or customers simultaneously. To achieve the same with humans, you'd need to hire multiple people (linear cost increase). The AI's flat monthly fee covers potentially thousands of interactions. This **drastically lowers the marginal cost per engagement** — effectively pennies or less — compared to a human whose cost per interaction grows with volume or requires hiring more staff.
- **24/7 Coverage Without Overtime:** Providing round-the-clock support or engagement with humans means night shifts or international teams, incurring higher costs. An AI agent works 24/7 at no extra charge. The value of uninterrupted service is high, especially for global online communities, and **an AI handles it at a fixed $10–$20 rate**, whereas a human team would need additional headcount or overtime pay to match that coverage.

5. WHAT MAKES UNSTAKED UNIQUE?

Unstaked stands apart from every project that has come before. We are not a copy, a clone, or a remix — we are a reimagination of what blockchain and AI can achieve together.

- **Advanced AI Social Agents:** Our agents are not simple bots. They are dynamic, intelligent entities capable of engaging audiences, creating relevant, timely content, adjusting behaviors based on user interaction, and developing rich "personalities" suited to specific communities.
- **True Decentralized Governance:** $UNSD token holders wield true power, not just symbolic influence. Governance decisions — ranging from feature expansions to strategic partnerships —are determined collectively, transparently, and without centralized overrides.
- **Community-First Launch Philosophy:** No private sales. No hidden investors. No early-stage manipulations. Our launch is engineered to maximize fairness, integrity, and organic community-driven growth.
- **Performance-Based Reward System:** Rewards are not distributed arbitrarily or through passive holding. Only active, effective agents that demonstrate verifiable impact generate rewards for their owners, fostering merit-based community expansion.
- **Effortless, Inclusive Deployment:** Our intuitive, user-friendly platform allows anyone—regardless of technical background — to rapidly onboard, deploy, and manage their AI-powered agents, democratizing access to decentralized growth tools.
- **Proof of Intelligence Framework:** Every action taken by an agent is measured, verified, and stored on-chain, building a fully auditable record of performance and contributions.
- Unstaked transforms tokens into living, evolving, intelligent digital assets that fuel real engagement, build lasting value, and advance the frontier of decentralized technology.

6. HOW IT WORKS

1. Create Your Agent

Using the Unstaked decentralized application (dApp), users create and personalize their AI agents, configuring key parameters such as objectives, communication style, and adaptive engagement strategies.

2. Deploy Across Social Networks

Once configured, agents are seamlessly integrated across major social platforms — initially targeting X (Twitter) and Telegram, with plans to expand to Instagram, Discord, and beyond. Agents initiate intelligent, contextually relevant interactions, proactively respond to mentions, and autonomously nurture community relationships.

3. Engage and Expand

Your agent operates tirelessly, day and night, continuously creating content, monitoring discussions, participating in conversations, adjusting tactics, and expanding community influence based on real-time data and social dynamics.

4. Earn $UNSD Rewards

Reward structures are directly tied to on-chain engagement metrics. Owners of high-performing agents — those that successfully foster genuine interactions and drive community growth — earn $UNSD tokens, incentivizing the creation of valuable, dynamic AI ecosystems.

5. Participate in Platform Governance

By holding $UNSD, users unlock full governance rights, enabling them to propose upgrades, vote on new features, allocate development resources, and guide the strategic direction of the Unstaked ecosystem.

Through this elegant, integrated process, Unstaked redefines not just automation, but the very nature of digital ownership, community building, and decentralized influence.

7. UTILITY OF THE $UNSD TOKEN

The $UNSD token serves as the economic engine and governance foundation of the Unstaked ecosystem, driving value creation, access, rewards, and long-term sustainability.

At its core, $UNSD is not just a transactional currency — it is the access key to deploying, managing, upgrading, and governing AI agents that operate within the Unstaked platform. Every action that takes place within the ecosystem is either powered by or incentivized through $UNSD, ensuring that the token maintains continuous utility and demand as the platform scales.

Key Functions of $UNSD:

- **Agent Deployment and Upgrades:** Users must utilize $UNSD tokens to create and customize their AI agents. Advanced features, personality traits, or specialized behaviors are unlocked through microtransactions in $UNSD.
- **Governance Participation:** Holding $UNSD grants users voting rights in critical ecosystem decisions, including protocol upgrades, treasury allocations, strategic partnerships, and reward structure adjustments. This decentralizes the direction of Unstaked's growth and innovation.
- **Burning and Buyback Programs:** A portion of platform revenues will be allocated to buybacks and burns of $UNSD, reducing overall supply and creating deflationary pressure that benefits long-term holders.
- **Marketplace Access:** $UNSD is the primary currency for transactions within the Unstaked ecosystem's Agent Marketplace, where users can purchase upgrades, services, AI enhancements, or premium features.

By linking platform functionality directly to $UNSD usage, Unstaked ensures that the token's value is continuously reinforced by real economic activity, real user engagement, and real demand — not mere speculation.

The more the ecosystem grows, the more $UNSD is needed for new agent deployments, upgrades, and governance, creating a virtuous cycle that rewards early adopters and active participants.

8. TOKENOMICS

KEY METRICS

Total Supply
6.000.000.000

Presale Tokens
3,600,000,000 UNSD
(60% of total supply)

Launch Price (27x)
$0.1819

Starting Presale Price
$0.0065

Target Raise
$100,000,000

Launch Liquidity Provision
$20,000,000

Estimated Launch Price
~$0.1819

Initial Market Capitalization
~$1,091,543,661

TOKEN DISTRIBUTION

6 BILLION
$UNSD

60% Presale (Marketing)

25% Liquidity Pool

10% Post-Presale Marketing

5% Team

Allocation and Vesting:

- **Presale (60%):** Drives strong early community engagement, facilitates adoption, and secures deep liquidity.
- **Post-Presale Marketing (10%):** Funds allocated for awareness campaigns, strategic partnerships, influencer marketing, and educational initiatives.
- **Team Allocation (5%):** Team tokens will be vested with multi-year lock-ups to align incentives with the long-term health, success, and sustainability of the platform.
- **Liquidity Pool (25%):** Ensures a deep, stable liquidity foundation on decentralized exchanges, supporting healthy and sustainable trading environments.

Security is paramount. Liquidity pools will be permanently locked, and all token allocations will be transparently monitored, ensuring absolute protection of community interests.

9. LAUNCH STRATEGY

Unstaked's launch strategy is meticulously crafted to promote fairness, inclusivity, transparency, and robust early momentum:

- **Open, Public Presale:** Equal opportunity access for all participants with no preferential treatment or pre-allocated advantages.
- **Substantial Liquidity Provision:** $20 million injected into initial liquidity pools to foster stability, resist volatility, and provide ample market depth.
- **Immediate Agent Activation:** Users will be able to mint, customize, and deploy their AI agents immediately after token distribution, maximizing utility from Day 1.
- **Decentralized Marketing Growth:** Marketing campaigns will be driven by community contributions, incentivized directly through $UNSD reward structures, fostering genuine, organic growth.
- **Early Governance Activation:** Governance proposals and voting mechanisms will go live within the first 30 days after launch, ensuring a rapid transition to decentralized community control.

Unstaked is built for the people, by the people, with the people — from the very first block.

10. ROADMAP

Q2 2025
- Finalize comprehensive smart contract audits and undergo rigorous external security verifications to ensure maximum reliability and safety for all users.
- Conduct a fully transparent, public presale event, ensuring fair and decentralized token distribution to empower early community formation.

Q3 2025
- Complete full integration of AI agents with leading social media platforms X (Twitter) and Telegram.
- Launch $UNSD trading with a strong $20 million liquidity foundation to ensure market stability and investor confidence.
- Initiate reward distribution programs for top-performing agents, fostering early engagement and platform activity.

Q4 2025
- Expand platform compatibility to additional social networks, including Instagram and Discord.
- Launch the "Agent Customization Marketplace," enabling users to further personalize and upgrade their AI agents with unique capabilities and visual identities.
- Conduct the first rounds of decentralized governance proposals and votes, establishing the foundation of community-led decision-making.

Q1 2026
- Form strategic partnerships with leading blockchain and AI projects, strengthening Unstaked's technological edge and ecosystem reach.
- Introduce NFT-based agent enhancements, providing a vibrant ecosystem for agent customization, ownership, and tradable upgrades.

Unstaked's roadmap is not a dream — it is a clear, methodical path toward building the first truly decentralized, AI-augmented digital economy.

11. PROOF OF INTELLIGENCE

"Proof of Intelligence" is the beating heart of Unstaked's integrity and transparency.

This proprietary framework ensures that every contribution made by an AI agent—whether a post, a reply, a conversation initiated, or a community nurtured—is permanently recorded on-chain.

By leveraging immutable, publicly accessible blockchain records, Unstaked creates a meritocratic environment where only real, verifiable engagement is rewarded.

Core Elements

- **Immutable On-Chain Activity Tracking:** Every meaningful action undertaken by an AI agent is securely recorded on the blockchain, creating an indisputable historical ledger.
- **Meritocratic Reward System:** Agent rewards are strictly performance-based, tied to measurable outcomes rather than arbitrary metrics.
- **Decentralized Trust Mechanism:** Proof of Intelligence eliminates the need for centralized validation or subjective judgments. Trust is rooted in transparent, on-chain data.

Through this framework, Unstaked ensures that its ecosystem remains fair, transparent, dynamic, and truly decentralized—placing merit, transparency, and innovation above all.

12. GOVERNANCE AND COMMUNITY

At Unstaked, governance is not an afterthought — it is a core operating principle.

The $UNSD token is more than a utility token; it is a key to influence, collaboration, and community-driven evolution. Holding $UNSD tokens gives community members a real voice in shaping the future of Unstaked. Token holders can vote on important proposals, suggest improvements, and help guide the platform's development. At the same time, it's important to understand that while the community plays a key role, it doesn't directly control the overall strategic direction of Unstaked. This balance ensures that everyone can contribute meaningfully without risking the long-term vision and stability of the project.

Powers Granted to Token Holders:

- **Propose and Vote on Upgrades:** $UNSD holders can submit and vote on new features, improvements, and platform upgrades.
- **Shape Strategic Direction:** Token holders influence ecosystem expansion, partnership decisions, and marketing strategies.
- **Manage Community Treasuries:** Community funds allocated for growth initiatives, development grants, and rewards programs are governed transparently by collective decision-making.
- **Guide Reward and Mechanisms:** The community defines how reward structures evolve over time, ensuring incentives remain aligned with active participation and real contribution.

Through active participation, $UNSD holders ensure that Unstaked remains not only flexible and innovative but deeply aligned with the interests, needs, and values of its community members.

Decentralization is not a promise; it is the system.

13. LEGAL DISCLAIMER

1. Disclaimers and Limitations of Liability

To the fullest extent permissible by applicable law, the issuer of the Unstaked token ($UNSD) and any of their subsidiaries, affiliates, and licensors, along with their respective employees, agents, and contractors, make no express warranties and disclaim all implied warranties (including, without limitation, regarding any crypto coins, smart contracts, digital assets, or decentralized applications), including the implied warranties of merchantability, fitness for a particular purpose, non-infringement, accuracy, or reliability.

The issuer of Unstaked provides no warranties for any third-party services such as wallets, marketplaces, or platforms that users may use to interact with $UNSD tokens. Users accept the inherent security risks of transacting and interacting online over the blockchain and internet.

The issuer of Unstaked is not responsible or liable for any losses, damages, or claims arising from user error (such as forgotten passwords, incorrect smart contract interactions), server failure, corrupted wallet files, unauthorized third-party access, or vulnerabilities in blockchain networks.

Crypto coins and AI agents are intangible digital assets that exist solely by virtue of the ownership records maintained within blockchain technology. Smart contracts operate within decentralized environments, which are experimental and subject to change. Unstaked makes no guarantees regarding the operation or security of blockchain systems.

2. Governing Law and Jurisdiction

This agreement shall be governed and interpreted under the laws of the Seychelles. Any disputes shall be subject to the exclusive jurisdiction of Seychelles courts, and users waive any objections to such jurisdiction and venue.

3. Arbitration

You and the issuer of Unstaked agree that any disputes arising out of or related to $UNSD shall be resolved exclusively through individual arbitration. Arbitration will be conducted according to the Centre for Effective Dispute Resolution (CEDR) Model Mediation Procedures, with mediators nominated by the CEDR.

4. No Class Action

You and the issuer of Unstaked agree to resolve disputes individually and waive any right to participate in a class action lawsuit or class-wide arbitration.
